

What is claimed is:

1. A sports figure shaped fan for ventilation grills comprising:
a caricature formed in the shape of a sports figure;
means for attaching the caricature to a ventilation grill;
the caricature further including two arms, the two arms representing respectively a left arm and a right arm attached to corresponding left and right shoulders of the caricature;
the two arms having means for rotating about each respective left and right shoulders of the caricature; and
the two arms having means for capturing an air flow generated by activating a ventilation system so as to create an air flow emanating from behind the sports figure, and for creating a fanning rotation of the two arms in a direction mimicking a throwing action of the sports figure,
wherein at least a portion of the sports figure includes a representation of a sporting uniform worn by said sports figure.
2. The sports figure shaped fan according to Claim 1, wherein
the caricature includes a central body portion, legs and feet, and a head and neck portion extending from an upper portion of the central body portion; and
the central body portion defines a representative lower torso, chest area and said left and right shoulders of the caricature.
3. The sports figure shaped fan according to Claim 1, further comprising:

access means for inserting one of a scenting agent, a deodorizing agent and a combination thereof, in an interior reservoir in a designated portion of the caricature;

the reservoir being holding means for storing one of the scenting agent, the deodorizing agent and the combination thereof;

said one of the scenting agent, the deodorizing agent and the combination thereof providing means for one of air freshening, deodorizing and the combination of air freshening and deodorizing; and

the designated portion of the caricature being sufficiently permeable on either side of the interior reservoir so that when the air flow passes by the sports figure, a vapor from said one of the scenting agent, the deodorizing agent and the combination thereof, is dispersed by the movement of the air flow emanating from the ventilation grill.

4. The sports figure shaped fan according to Claim 3, wherein the access means for inserting one of the freshener scenting agent, the deodorizing agent and the combination thereof in the reservoir, is an aperture in the designated portion of the caricature.

5. The sports figure shaped fan according to Claim 4, wherein the aperture is located in a head portion of the caricature.

6. The sports figure shaped fan according to Claim 1, wherein a pre-determined portion of a head portion of the caricature is temporarily removable to provide access to an interior reservoir serving as holding means for storing one of a scenting agent, a deodorizing agent and a combination thereof;

said one of the scenting agent, the deodorizing agent and the combination thereof providing means for one of air freshening, deodorizing and the combination of air freshening and deodorizing; and

the head portion being sufficiently permeable on either side of the interior reservoir so that when the air flow passes by the sports figure, a vapor from said one of the scenting agent, the deodorizing agent and the combination thereof, is dispersed by the movement of the air flow emanating from the ventilation grill.

7. The sports figure shaped fan according to Claim 2, wherein the central body portion, the head and neck portion, the legs and two arms are made from material selected from the group comprising one of polymeric material, cardboard material, light-weight metallic material and a combination thereof.

8. The sports figure shaped fan according to Claim 1, wherein the means for attaching the caricature to the ventilation grill is attached to a base portion underlying said caricature, a top surface of the base portion representing a surface on which the caricature is standing.

9. The sports figure shaped fan according to Claim 8, wherein the means for attaching the caricature to the ventilation grill comprises:

a clip having a gripping portion at one end thereof for gripping a portion of the ventilation grill and an engagement portion on the base portion; and

means for adjusting an orientation of the caricature relative to the ventilation air flow direction.

10. The sports figure shaped fan according to Claim 9, wherein the means for adjusting the orientation of the caricature relative to the ventilation air flow direction is a ball and socket joint.

11. The sports figure shaped fan according to Claim 1, further comprising:
means for lighting a desired portion of the caricature, said means for lighting the desired portion of the caricature having circuitry to receive telecommunication transmission signals, which activate a circuit that activates an illumination means within the desired portion of the caricature.

12. The sports figure shaped fan according to Claim 11, wherein the illumination means is a LED bulb.

13. The sports figure shaped fan according to Claim 11, wherein the telecommunication transmission signals are received by a cellular phone.

14. The sports figure shaped fan according to Claim 11, wherein the desired portion of the caricature that is illuminated is the head portion.
